PACKING AND SHIPPING

No extra charge is made to cover packing costs on most items. However, on items of a bulky nature, a packing or delivery charge may be made unless such material is ordered in connection with considerable other stock. No charge is made for delivery to freight depots or express offices. Plain and explicit shipping directions should be given with every order, naming mode and route for forwarding, otherwise, we will use our own judgment.

MOTOR TRUCK DELIVERY

Motor truck delivery of substantial orders is usually possible without charge within a reasonable radius of our nursery. Included in this area is Philadelphia and suburbs and the Metropolitan area of New Jersey as well as more local points. This service can be arranged to points of greater distance such as suburban New York, Western Connecticut and Long Island, to Baltimore, Washington and Harrisburg. The cost of trucking depends upon the amount of the order and the length of haul. This is a matter of special arrangement. Prices in this catalog do not include planting. Planting is additional depending on size of order, condition of planting area, etc. Estimates including planting will be supplied on request.

PAYMENTS

Cash with order, excepting to persons who satisfy us as to their financial responsibility. Satisfactory Bank or Trade References are requested of persons desiring to open an account. An abatement of 2% may be taken if payments are made within 10 days from date of invoice. All accounts are due within 30 days from date of invoice.

GUARANTEE

Stock is guaranteed true to name and fully up to grade and quality specified. We agree to resupply at one-half the original price paid any plants that may die from natural causes, other than abuse or neglect, within one year from date of invoice. This guarantee is contingent upon full payment of account within 30 days from date of invoice.

CLAIMS

Claims of any nature must be presented within 10 days from date of arrival of stock. If shipments should be delayed or damaged in transit, have them examined at the depot before receiving them, and any complaint arising should be noted on the freight or express receipt, together with the agent's acknowledgment. This will help in recovery of damages.

All terms are subject to change without notice.

MOON'S EVERGREENS

In this family there is truly "a plant for every place and purpose" - some for the limited areas of foundation plantings or for bed and border uses, others for screens, hedges and windbreaks and for group and specimen plantings.

The following key is designed to assist in the selection of Evergreens of the different types best suited for the location in which it is desired to plant them:

Varieties marked (L) usually attain a height of 60 ft. or over at maturity; (M) 30 to 60 ft.; (S) 10 to 30 ft.; (D) 4 to 10 ft.; (VD) below 4 ft. It should be noted in the description of varieties and group headings, however, that many sorts are shearable, and therefore adaptable to limited areas.

Prices of Evergreens include digging with ball and burlap except where otherwise noted.

MOON'S EVERGREEN SHRUBS

Broad-leaf Evergreens

A group of Shrubs, mostly shade loving, and usually of splendid foliage. Some varieties are particularly profuse and colorful in their bloom. Their fondness for shade adapts them for use about shady house foundations and elsewhere where it is difficult to get other plant material to thrive through lack of sunlight.

Cultural Notes - As a rule, these varieties transplant very easily and give immediate effects, but it must be borne in mind that they do not like limestone soils, and thrive most readily in what is known as "woods earth", or ground composed chiefly of decomposed vegetable matter.

It is important to remember that the varieties in this group are most successful when planted in groups, with a mulch of leaves maintained the year 'round to keep the roots moist.

MOON'S TREES

Deciduous Trees are often thought of chiefly for shade, yet there are varieties that vie with the choicest flowering plants in the wealth and beauty of their bloom and showy fruit. Where trees are graded by caliper as well as by height, it is understood that their value is determined by the caliper. The height may vary and the figures given are only mentioned to give an approximate idea of the size.

That the unacquainted may have an idea of the height to which each tree may be expected to grow, we have marked the varieties as follows: (L) designates trees growing to 60 feet or over at maturity; (M) from 30 to 60 feet; (S) 20 to 30 feet; (D) 10 to 20 feet; (VD) less than 10 feet. "B. & B." indicates trees dug with ball of earth about their roots and wrapped securely with burlap.

Do your children have a cool, shady place to play? Is it so comfortable and enticing that they have no temptation to play in the street with all its attendant hazards? A tree or two upon the lawn will provide this delightful playspot - a place of safety for the children, contributing to their health and happiness and to your peace of mind.

MOON'S SHRUBS

Individually or collectively, shrubs are an important feature in the adornment of any grounds. The Autumn color which the leaves of many varieties assume sets the lawn ablaze at that season. The brilliant berries of some sorts tempt the birds to linger, and together with the bright bark of such shrubs as some of the Dogwoods, give a tone of color even to the gray landscape of Winter.

Shrubs that usually grow over 12 feet are marked (L); from 8 to 12 feet (M); from 3 to 6 feet (D); and 3 feet or below (VD).

The months of the year mentioned in the description indicate the season when the shrub usually flowers.
